

**PTV** NAVIGATOR

the mind of movement

**PROFESSIONAL  
NAVIGATION SOLUTIONS  
FOR TRUCKS AND FLEETS**

# ARE THERE TOOLS THAT CAN GET YOU THROUGH ANYTHING?

Narrow roads, low bridges, no opportunities to turn around - a lot of roads are not made for freight traffic. But does your navigation device know that?

From the start, PTV Navigator will only guide your drivers on routes that are suited and permissible for their vehicle type. This means cost efficiency, safe planning and less stress for the driver. Rely on software that has been especially designed for professional fleet management that is scalable and configurable. PTV Navigator has been developed for professional users: the software can be used on standard mobile end devices, either as a "stand-alone" solution for every employee or integrated into existing company solutions for fleet or customer management.

# HIGHLIGHTS

## TRUCK RESTRICTIONS

Configure your vehicle's profile (dimensions, weight, maximum axle load) and automatically take into account all limitations for your vehicle type like road restrictions, tunnel restriction codes for hazardous goods, unsuitable route sections, e.g. with restrictions for water-polluting and explosive goods as well as roads closed to trailers.

## TRUCK ROUTING

PTV Navigator always guides you on the most efficient routes for your type of vehicle: Avoid residential areas and narrow roads, pedestrian zones and unsuitable turning manoeuvres. Allow the access of pedestrian zones, closed streets, restricted and private areas like factory premises on the last mile.

## TRUCK PARKING INFORMATION

Benefit from Europe's biggest Truck Parking Community: PTV Navigator shows you the next parking possibilities close to your location. About 15,000 truck parks along European roads and more than 27,000 insider tips like industrial areas help you to drive and rest according to legal regulations.

## LIVE TRAFFIC INFORMATION

Always be informed about the current traffic situation: in case of traffic jams you can re-calculate the route and choose to avoid traffic jams. Your estimated time of arrival (ETA) is always up-to-date and gives you the possibility to react to delays immediately. You always have full control of how you are being routed.

## EASY, COMFORTABLE NAVIGATION

- ▶ **Autozoom:** stay focused on the right map section and keep track of your route
- ▶ **Tunnel extrapolation:** safe navigation, even in tunnels
- ▶ **Signposts and junction views:** realistic signposts and junction views
- ▶ **Text2Speech:** reads out turning instructions, road names, signs and traffic reports (available in 16 languages)
- ▶ **Map data** (available in 19 languages)

## API

- Includes extensive programming interface for process integration. Connect your navigation device with the backend system and
- ▶ import scheduled multi stop routes.
  - ▶ start and stop mobile navigation.
  - ▶ retrieve GPS position.
  - ▶ geocode
  - ▶ get navigation events
  - ▶ etc.

## TRANSFER OF OPTIMISED ROUTES

- Transfer centrally planned routes (e.g. through PTV Map&Guide, PTV Smartour, PTV xServer or another system) via BCR-files to a mobile device. With this you make sure that
- ▶ multiple stopovers are visited in the best sequence.
  - ▶ the optimum sequence of route stations is followed exactly.
  - ▶ distance estimates and driving times are realistic.
  - ▶ toll and emission calculations are correct.

Guided Navigation routes can also contain route elements that are not part of the navigation map.

# LIVE TRAFFIC

Always keep updated about current traffic conditions on your way while maintaining control of the navigated route.

## YOUR ADVANTAGES

- ▶ Display of road works, traffic jams and blocked roads
- ▶ Consideration of traffic situation for route planning, if desired
- ▶ With the appearance of new traffic incidents the route can be re-calculated
- ▶ Improved and constantly updated Estimated Time of Arrival (ETA)
- ▶ Timeline for convenient overview of traffic disturbances and delays on the way
- ▶ Permanent display of the anticipated delay
- ▶ Road segments with traffic incidents are displayed in different colours. Additionally to the colour of the road, also the colour of the road edges change. If the traffic incidents affect your route, the edge will turn to purple, while road segments off your route have white edges

# TRUCK PARKING

Always find the nearest and most suitable truck parking space along your route. When activated the next stopovers are displayed on the screen and drop in sequentially as you drive on.

Clicking on a concrete parking space opens a window with additional information. If the parking provides the desired features you can navigate there just by clicking "Enter as destination".

Icon, describing the kind of parking

Distance to the truck park

Total number of free parking spaces (if available)

Name of the truck park

Truck parking information is stored directly on the device so no online connection is required. So far, PTV Navigator gives you access to more than 15,000 truck parks and 27,000 industrial areas along the routes throughout Europe. PTV therefore integrates the data of the leading and rapidly growing trucker community App "Truck Parking Europe". You can definitely expect more truck parks and insider tips with forthcoming updates.

# TRANSFER OF OPTIMISED ROUTES FROM CENTRAL PLANNING SYSTEMS

Export your routes from PTV Map&Guide, PTV xServer or PTV Smartour and send them via e-mail directly to your driver's mobile Android device.

## HOW IT WORKS

1. Calculate your route with all required stops in your system
2. Export the route as a BCR-file or Guided BCR-file
3. Send this file to your driver's e-mail account
4. Driver saves or opens the attached BCR-file. When opened, PTV Navigator loads the route automatically and starts the navigation.

## YOUR ADVANTAGES

- ▶ The optimal sequence of stops is being transferred directly to the driver's smart device
- ▶ Driver can start his route immediately
- ▶ Driver sees only the route and navigation to his next stop
- ▶ PTV Navigator will lead him on the optimal route for his

## PLANNING AND EXECUTION WITH PTV NAVIGATOR

## MAKE IT EVEN MORE PRECISE

With Guided Navigation you can transmit not only the optimal sequence of stopovers to your drivers but also the exact route. In this case PTV Navigator does not calculate the route between two stops itself but takes over the exact route from your central planning tool. With this you make sure that the centrally planned route fits the route that is actually driven incl. appending calculations like fuel costs, driving time, emissions, etc.

# EASY DEPLOYMENT FOR PARTNERS, RESELLERS AND FLEET OWNERS

License management has never been easier!

## HOW IT WORKS

We put enormous effort into facilitating the work with our Android version for you and designed the administration of licenses as easy and simple as possible:

- ▶ Your personally adapted version with full range of functionality is located on the PTV Download Server (DLS). With this you can provide your customers with full or individually restricted versions of PTV Navigator for Android.
- ▶ PTV Navigator and associated data and maps can be pre-installed for whole fleets or downloaded directly with the mobile device via Wi-Fi.
- ▶ More features can easily be licensed afterwards.

## YOUR ADVANTAGES

- ▶ Central administration
- ▶ Roll out updates remotely
- ▶ License check
- ▶ Pooling of licenses
- ▶ Access control permissions

## RESELLER AND CUSTOMER PORTAL

- ▶ A new portal enables reseller and fleet owners to manage their licenses themselves.
- ▶ Licenses on customer's devices can be managed, e.g. when a device is broken, lost or returned.
- ▶ Overview and control over how many licenses are active and managing of permissions, e.g. when one license is running on various devices.

## WHERE CAN YOU GET IT:

- ▶ For company licenses please contact your local sales representative directly or via [navigator.ptvgroup.com](http://navigator.ptvgroup.com)
- ▶ You can get Single Android versions at Google Playstore. Test now for 14 days for free!
